

National 2 Science in the Environment

National 2 Science in the Environment

What do I need to do it?

This course is suitable for those wishing to work towards a science qualification for the very first time.

What will I learn?

Manage a local environmental area for living things

Find out about living things

Explore the human body and factors that affect health and wellbeing

Use resources responsibly
Explore forces and energy

What will I do?

This course is practical and experiential, aiming to develop an awareness and understanding of science in the environment through real-life contexts.

By relating science to real-life, learners will begin to understand how it affects and influences themselves, lifestyle, society and the environment.

This course aims to develop skills for learning, skills for life and skills for work.

How will I be assessed?

The following types of evidence may be collated during this course:

- Written evidence
- Results of tests, quizzes or competitions
- Oral evidence from discussions between the teacher and the learner,
- Observation notes used during tasks
- Extracts from workbooks or jotters
- Photographs of project or investigative work
- Diagrams, posters, pictures or illustrations
- Video recordings of practical activities

Homework

Homework will be selected in the most appropriate manner to support each individual's learning journey.

Progression in the Senior Phase

On successful completion of this Course, the learner could progress to other qualifications in science or science related areas, further study, employment and/or training.
