Opportunities for adults to study for a National 4 Maths Qualification

We would like to inform you of a new offer for **adult learners (19+ years)** to study for a National 4 Maths qualification, fully funded by the Multiply programme. Currently, there is no provision for adult learners to study National 4 Mathematics in the Scottish Borders, so this is a great opportunity for those without this qualification to upskill and progress in life and work.

This is a full qualification (3 units and an added value assignment), however learners will begin their studies with National 4 numeracy (different to level 4 numeracy) and if they find full course demanding they will have the opportunity to 'bank' this unit. The National 4 Maths Course content, including the numeracy unit can be found here. From this you will see that the course is also a stepping stone for future progression towards National 5.

Those who already have qualifications in Level 3/4 numeracy, or National 3 Mathematics and are looking to progress would be ideal candidates.

This course will run over 33 weeks with Scottish Borders Maths Tuition. The home setting will be very comfortable for learners, including the company of a friendly African grey parrot! 😊 The home is an accredited SQA centre and is located in Tweedbank, and bus travel is very easy, with a stop just outside.

Jennifer, the very friendly and welcoming Maths tutor has 30-years of experience, and adopts a relaxed approach in her delivery of the course, with refreshments provided. She teaches to a maximum of 3 learners in each group session, and currently has space left for 1 learner on a Tuesday evening at 6:15pm, and space for 2 learners on a Friday, the time flexible depending on learners' needs. Jen has much experience in teaching neurodiverse and dyslexic students, and supporting neurodiverse students has actually been the main focus of her business.

Please do get in touch if you know of any prospective learners or have any further questions,

The Multiply Team
